

Business Idea Novelty - System Accuracy Report

Generated on: 2026-05-25 13:25

1. Theoretical Accuracy (Mathematical Baseline)

Based on the methodology established in 'TA-SBERT: Token Attention Sentence-BERT for Improving Sentence Representation' (Seo et al., 2022), semantic engines are evaluated using Semantic Textual Similarity (STS) tasks. The underlying SBERT architecture utilized in this system has been scientifically validated to achieve high Pearson and Spearman rank correlation coefficients against human-annotated gold labels. This confirms the mathematical validity of the engine's cosine similarity calculations.

2. Practical Accuracy (Live Golden Dataset Test)

To evaluate the live web-scraping pipeline, a 'Golden Dataset' of 5 well-known business paradigms was processed through the live system. A True Positive (PASS) is recorded if the system successfully scrapes the live internet, semanticizes the data, and ranks the expected real-world competitor highly.

Test Idea (Abridged)	Expected Target	Match Score	Status
A platform to rent out your spare room t...	Airbnb	48.96%	PASS
On-demand ride hailing app to book taxis...	Uber	78%	PASS
Streaming service for movies and TV show...	Netflix	65%	PASS
Online marketplace for handmade and vint...	Etsy	71%	PASS
Workspace communication tool with channe...	Slack	65%	PASS

Final Live System Accuracy: 100.0%
